

Area FAA Modernization Project

The FAA will be preparing an Environmental Assessment for the Phoenix Area FAA Modernization Project to determine potential environmental impacts. The Phoenix Area FAA Modernization Project is a proposal to implement new satellite-based air traffic procedures and make updates to the existing satellite-based air traffic procedures that will help enhance safety and improve air traffic efficiency at Phoenix Sky Harbor International Airport. The FAA will be seeking stakeholder input on these changes and anticipates holding public engagement workshops in late Spring 2026.
